### **DETAILED ACTION**

Applicant's election with traverse of group IX, claim 14, in the reply filed on 9/18/2006 is acknowledged. The traversal is on the ground(s) that there is sufficient overlap in the material recited in claims 14, 10, and 16. This is not found persuasive because the inventions are distinct if they have a materially different design, mode of operation, function, or effect. See MPEP § 806.05(j). In the instant case, molecules comprised of different sequences have a different design, mode of operation, function, or effect. Additionally, the claimed inventions drawn to molecules are distinct from the claimed invention of claim 16 because claim 16 is drawn to a library of molecules, which is an invention with a materially different design, mode of operation, function, and effect. Therefore, while the claimed inventions may be drawn to similar subject matter concerning particular types of sequences, they are very distinct inventions for the reasons cited above.

The requirement is still deemed proper and is therefore made FINAL.

Claims 1-13 and 15-19 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected inventive group, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 9/18/2006.

The IDS's filed on 10/12/04 and 2/3/04 have been considered in full.

Claim 14 is the current claim hereby under examination.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claim 14 is rejected under 35 U.S.C. 102(e) as being anticipated by Sliwowski (US P/N 6,949,245).

The claims are directed to an intracellularly binding immunoglobulin molecule comprising: a variable heavy chain, which exhibits at least 85% homology to the consensus sequence SEQ ID No 3; and a variable light chain.

Sliwowski teaches the limitations of claim 14 at col. 10, lines 15-21, col. 64, lines 58-67, col. 65-66 and col. 69. Sliwowski at col. 10, defines an intact antibody as a molecule that is comprised of both heavy chain and light chain components.

Sliwowski at col. 64 further discusses antibodies used for therapy in colorectal cancer

Art Unit: 1631

and references an antibody that comprises seq id no 6, which is a sequence with 93.6% homology to the claimed heavy chain in claim 14 of the instant patent application.

Therefore, the antibody used that comprises seq id no 6, which is a consensus heavy chain, will also comprise a light chain by the definition of an antibody, which reads on variable heavy chain which exhibits at least 85% homology to the consensus sequence SEQ ID No 3; and a variable light chain.
